CLI Backup Application - User Guide

Introduction

This console application enables you to manage backup jobs interactively through a command line interface (CLI). Users can navigate through the menus by entering the number corresponding to the desired option. For example, to select the option "1. view options", the user would enter "1" and press the enter key.

Main Menu options

0. Stop :
Exits the application.

1. View options :
Displays all options available in the main menu.

2. Change default language :
Allows you to change the language used by the application.

3. Show available languages :
Lists the languages supported by the application. These languages are in a format representing the language in two letters: "EN" for English and "FR" for French.

4. Open save task menu:
Allows you to manage save tasks. Opens the save task submenu on the right.

Save task Submenu

0. List all save tasks :
Displays a complete list of all save tasks.

1. Start one or several save tasks :
Allows you to run one or more existing save tasks.
The user must specify which jobs to run by entering the save task index(s).
Several options are available for specifying which task(s) to run:
- By specifying a single number, the application will start the relevant save task.
- If you specify "1-3", the application will start tasks 1, 2 and 3 (1 to 3).
- If you specify "1;3", the application will start tasks 1 and 3.

2. Create a save task
Allows you to add a new save task.
The user must provide :
- Source folder path.
- Target folder path.
- Save task type : Complete or Differential.
The user must enter each of these items of information one by one, as requested by the console application.

3. Edit an existing save task :
Displays a list of existing save tasks.
The user selects the index of the task to be modified (from 1 to 5). Only one save task can be selected at a time.
Possible modifications are :
- Modify task save type.
- Modify source folder.
- Modify target folder.

4. Delete a save task :
Displays the list of existing save tasks.
The user must specify the index of the task to be deleted (from 1 to 5). In the same way as for launching several tasks at once, the user can delete several tasks in one command using "1-3" and "1;3".

5. View options of save task submenu :
Displays the options available in the save task submenu.

6. Exit save task submenu :
Returns to the main menu.
